

RUBBER MULCH

Superior Rubber Mulch Surfacing - For a Soft Bound Finish

SOLUTION

A unique bound-in solution that gives a beautiful natural bark appearance. The environmental benefits of 100% recycled rubber bark make it far superior to organic mulches in every area.

USES

- ◆ Planters and Flower Beds
- ◆ Schools and Nurseries
- ◆ Play Parks and Adventure Centres
- ◆ Tree Surrounds
- ◆ Country Parks and Gardens
- ◆ Pathways
and more...

BENEFITS

- ◆ Highly effective weed control
- ◆ Does not absorb water or nutrients
- ◆ Discourages cats, dogs, slugs and snails
- ◆ Will not rot or blow away
- ◆ Enhances woodland or sensitive areas
- ◆ Extremely cost effective
- ◆ Satisfies environmental demands

COLOUR CHOICES

Attractive colour options available - can be mixed and inlaid graphics created as required.

Sandlewood

Arizona

Driftwood

Chesnut

PRODUCT PREPARATION AND APPLICATION

No formal ground preparation is required as it can be laid over most existing surfaces including soil and concrete.

Installation is as easy as emptying pre-measured rubber bark and resin into a forced action mixer and then into your retained area, 40mm is a typical depth.

Final finish is achieved by simply levelling and smoothing out using a hand trowel. For best results we recommend using a hand roller for a final finished surface.

SUPPORT AND MAINTENANCE

- ◆ Samples, full method and safety data sheets, demonstrations and on-site application supervision available.
- ◆ Constant helpline to answer questions and calculate your material requirements.
- ◆ Forced action pan mixer hire available.
- ◆ Will not blow or wash away so no heavy raking, topping up or replacement is needed.
